## Software Solutions of Schille Informationssysteme GmbH

Since years, the developments of Schille Informationssysteme GmbH are in use for facility management, security control technology, automation, video systems. Excellent references both, at home and abroad, as well as permanent orientation on the innovating market development underline the specific status of this product range.

### PVIs Enterprise Security

PVIs Enterprise Security is an integrated solution for the management of technical equipment of facility- and security technology. Modular-built, it affords multifarious solutions from a single-workstation to a company-wide control network. On the base of a realtime system core, the user interface affords a very short picture assembly- and response time, connected with a clearly arranged and user-friendly program philosophy.

### PVIs Web.Server

Based on JAVA™-technology of Sun, PVIs Web Server constitutes a completely new quality of control technology. With standard internet technologies there consists henceforth the possibility to deal with the complete visualisation, monitoring and control of technical installation by afar placed workstations via intra- or internet. All client-services are able to be recalled by browser-based technologies of standard computers.

### Digital video systems

Glueless integrated into PVIs-control system, videosystems afford digital record, video control, video communication and audio-visuell data communication. The close communication to alarmmanagement affords optimal assumption for successful recognition and determination of hazard-situations. Interfaces, to almost every commercially available digital and analog videosystem allow the assembly of high-integrated videosurveillance system.

### Specific development

Beside facility management, there is a multiplicity of related tasks, which makes the application of IT-supported implementation essential. Schille Informationssysteme GmbH delivers solutions, such as touchpanel-systems for mediaportal, an interactive TV- and Internet application for hotels- and conference-establishment. As a matter of course, all of our computer applications can be integrated into the PVIs-facility management.

### OPC-development

With OPC (OLE for Process Control) there is an unitary, worldwide approved standard for exchange of datas and signaling. For the first time it is possible, on foundation of this software-interface, to connect every technical assets competitive and in real-time. Since 1998 the OPC-interface is an element of the PVIs-software and thus one of the precursor in the range of facility-management. Due to our long lasting experiences with open standards we now offer our know-how to other companies for development of high capacity OPC-server.
